GO BP, genes up_in_quiescent
G protein−coupled receptor signaling pathway
positive regulation of locomotion
regulation of system process
positive regulation of cell motility
positive regulation of response to external stimulus
positive regulation of cell migration
circulatory system process
response to bacterium
blood circulation
regulation of membrane potential
angiogenesis
muscle system process
regulation of monoatomic ion transport
muscle contraction
regulation of blood circulation
heart process
heart contraction
regulation of heart contraction
striated muscle contraction
response to interferon−beta
